Batch processing and image adjustment tools are all fairly accessible. The Bridge/Layers control panel is very similar to Photoshop and makes for a quick and intuitive adjustment workflow. The new NatureKit filter pack has several new and interesting effects. The menu interface is usable, although a tad cluttered. Most of the functions are controlled via an easy-to-see and easy-to-use toolbar. Overall, I'm very happy with the new Photoshop. For price and features, it's hard to beat. Unlike a traditional drawing tablet that lets you create a very precise, art-like line drawing, the iPad Pro instead primarily just lets you add a label or line cutting tool. In this sense, it's a step from time-honored digital canvas technique. If you plan to draw with the pen, you should use the pressure sensitivity of the pen tip to give your lines dimension. In this case, it feels kind of like penciling paper. Unfortunately, there are no pressure sensitivity settings like in my Wacom bamboo tablet—it's exactly as if you're drawing with a pencil. The Apple Pencil lends a hand here by not having to press a button, so you can quickly sketch a line using the edge of the stylus. The pressure sensitivity settings work well for that. Some people might prefer this touch-based approach. If you prefer to work on a traditional digital canvas, this tool will feel like a stylus for when you're touching the screen. I found myself using a variety of tools for different techniques. You can use the stylus to draw tighter or looser lines; you can sketch out different shapes and add details, or just use it to rough in and refine features.
