

The software is designed to handle every aspect of directory browsing. It enables you to explore the directories with ease, view attributes in detail, view a user's full information, and even test its validity. Furthermore, it can handle authentication, password resets, access control, and other important aspects of LDAP. If you're looking to check the authenticity of an LDAP directory, you'll find that Softerra LDAP Browser is an extremely useful tool for this task. All you have to do is open a connection to the directory and submit your queries. This way, you can efficiently confirm whether or not the directory is valid and, if it is not, then change the settings to allow access to everyone. Key features: Exploration Softerra LDAP Browser makes it easy to view the structure and contents of the directory in detail. You can access both the operational aspects of the directory as well as those that are non-operational. For example, you can view user attributes, examine administrative attributes, and explore the branch structure of the directory. Analyze and report The software can be used to examine the contents of the directory. For this purpose, you must select the appropriate search parameter such as the operating system, the name of the directory, user, group, and so on. With this tool, you can extract information about the directory and view the details of the people who are defined as well as their attributes. To do so, you can also add filters to your query and specify the desired search results. Report If you want to know about the whole LDAP directory, then Softerra LDAP Browser will be extremely helpful. Once you're connected to the directory, you'll be able to view the structure and contents in detail. Using the report feature, you can run a comprehensive LDAP analysis in a matter of minutes. This way, you'll be able to investigate the directory and discover details about it. Explore the directory With Softerra LDAP Browser, you'll be able to navigate through the directory and view all of its details. In particular, you can run a search in the directory, use filters to specify search criteria, view information about users and groups, and so on. You can also filter by various properties of users and groups and view the attributes that these users or groups are granted access to. To view the details of users or groups, you can click on them and view their attributes
