In this latest version, Photoshop has a number of new features and some improvements, both in terms of its performance and user interface. As it prioritizes creators, user interface is one of the areas where Photoshop puts much effort. Photoshop CC 2019 is designed to take advantage of the full capabilities of tablets and mobile devices, including edges and gestures that make Photoshop a perfect fit for the way people work today. As a result, Photoshop CC 2019 allows you to perform 10x as many tasks on a mobile device as you can on a desktop -- opening and closing panels, navigating through the interface, adding layers and sharing. The Bottom Line; The Photoshop team must have gotten sick of making all the Layers. In the latest version of Photoshop, most of the work can be done with the Layers panel still open. Also, unlike previous versions, adjusting the "point" position of a layer is easier than before. The biggest thing until now was that you had to have Lightroom in order to use the Layers panel in Photoshop.
